Education

The University of Texas at Austin

Aug. 2021 – May 2025

Bachelor of Science in Mathematics, Elements of Computing Certificate

Relevant Coursework: Data Structures and Algorithms, Software Engineering I/II, Databases, Math for Machine Learning

Technical Skills

Languages: Python, C++, SQL, JavaScript, HTML/CSS

Tools & Systems: Git, Linux, Docker, CI/CD, PostgreSQL, Flask, React.js, Pandas

Experience

Modern Intelligence

Austin, Texas

Junior Software Engineer

June 2025 – Present

- Developed internal tools to support data labeling workflows, improving annotation efficiency and consistency for machine learning pipelines.
- Implemented data processing pipelines to ingest and organize large-scale image and video datasets.
- Contributed to migration of existing Python codebases to C++, reimplementing core functionality to improve performance and system efficiency.
- Packaged and deployed applications using Docker and transitioned internal tools to a desktop application to simplify distribution and usage.

Software Engineer Intern

February 2025 – June 2025

- Developed a system to index and analyze large-scale video/image datasets stored on a blade server.
- Built Python pipelines to extract metadata (file types, storage, frame counts) and store results in PostgreSQL.
- Containerized the application and created a Flask-based UI to visualize and filter dataset characteristics.

Data Science Intern

September 2024 – February 2025

- Processed and annotated large-scale image and video datasets to support training of computer vision models, ensuring high data quality and consistency.
- Performed QA/QC on labeled data to improve reliability and downstream model performance.
- Collaborated with engineering and ML teams to support data preparation and experimentation workflows.

The Superintendent Lab

Austin, Texas

Undergraduate Research Assistant

September 2024 – March 2025

- Gathered comprehensive name, demographic data, and contact information for U.S. K-12 public school superintendents.
- Ensured accuracy and completeness of collected data, maintaining meticulous records, and organizing information systematically.
- Assisted in analyzing collected data to identify trends and patterns related to superintendent gender and racial gaps, and labor market dynamics.

Projects

MusicMosaic | *Python, HTML/CSS, React.js, Bootstrap, Google Cloud Platform, PostgreSQL, Git*

April 2024

- Built a full-stack web application to display and query music data, including artists, albums, and tracks.
- Designed and implemented a PostgreSQL database and backend API to support structured data retrieval and filtering.
- Implemented frontend components and contributed to UI design using React and Bootstrap to improve usability and presentation.
